Retail solution – store floor

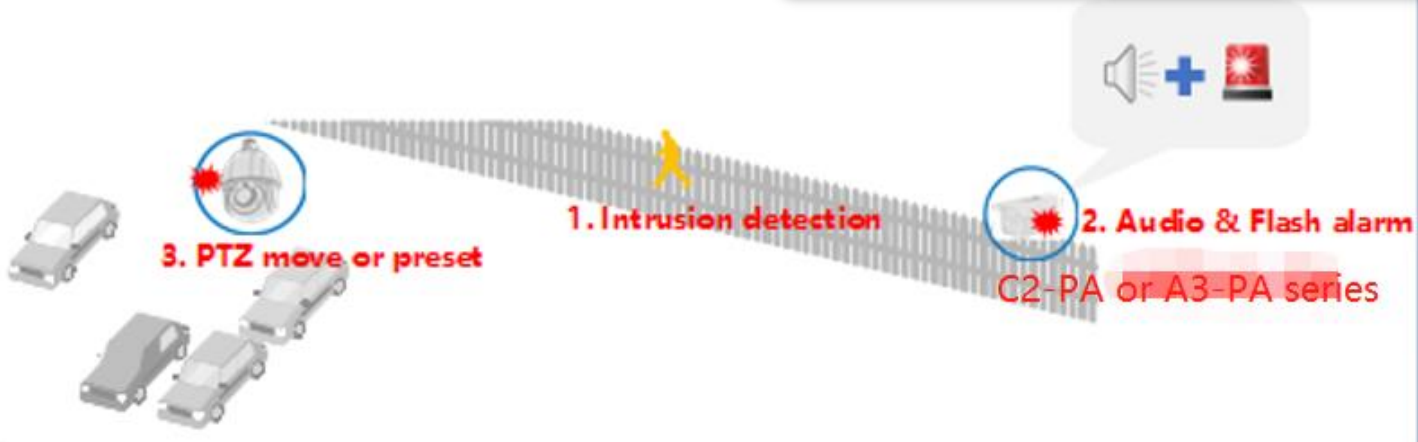

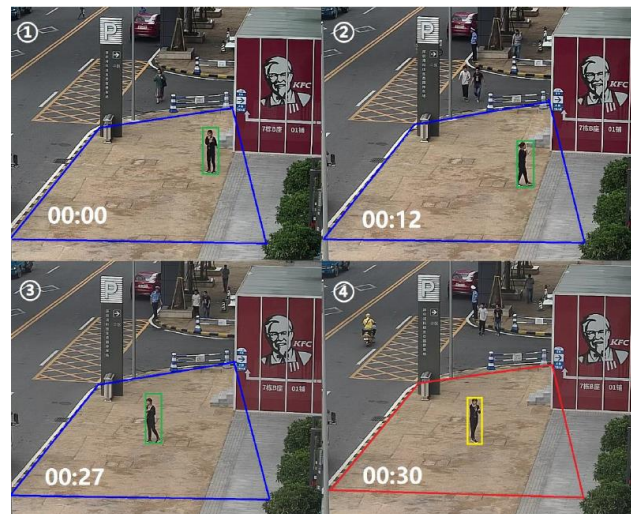

12MP fisheye can provide Omnidirectional(360°) view, and have several detection line crossing to cover the whole scene. The most important thing is that fisheye can have heat map feature to show which area is the hot sale area, and target counting as well.

Retail solution- Entrance

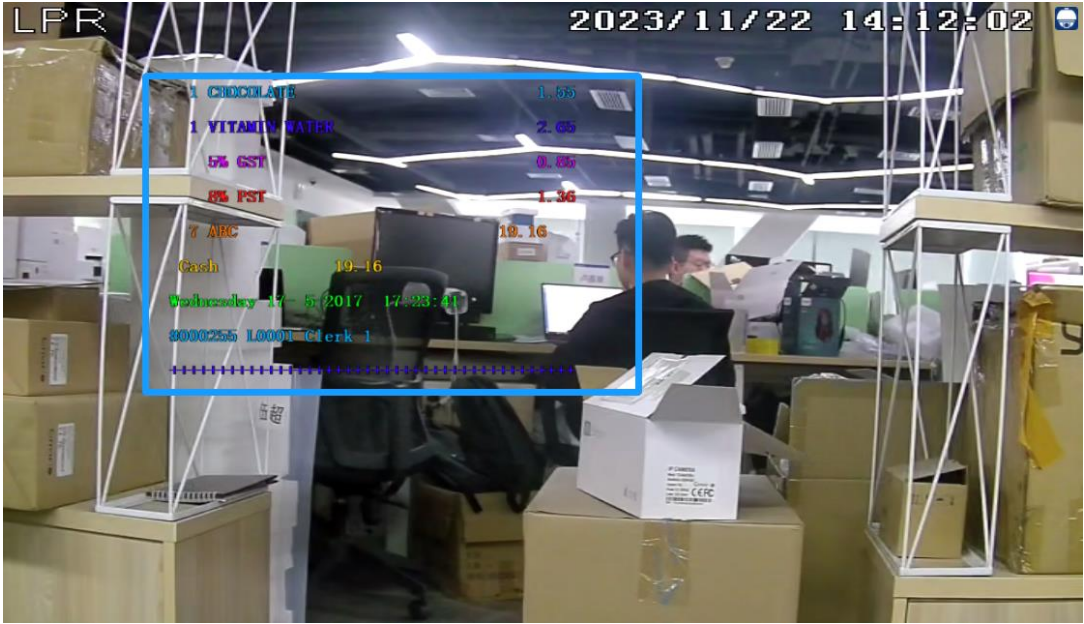

AI E3B series cameras provide people counting function, which can calculate the foot traffic at the entrance of the store and the statistic can be exported daily/monthly. Traffic analysis can greatly improve business efficiency.

Retail solution- Perimeter protection

If there is restricted area for parking or prevention for abnormal behavior(like loitering), TVT E3B AI camera can provide related solution. BTW, this system also can have active deterrence for some unfriendly behavior.

Retail solution- Checkout counter

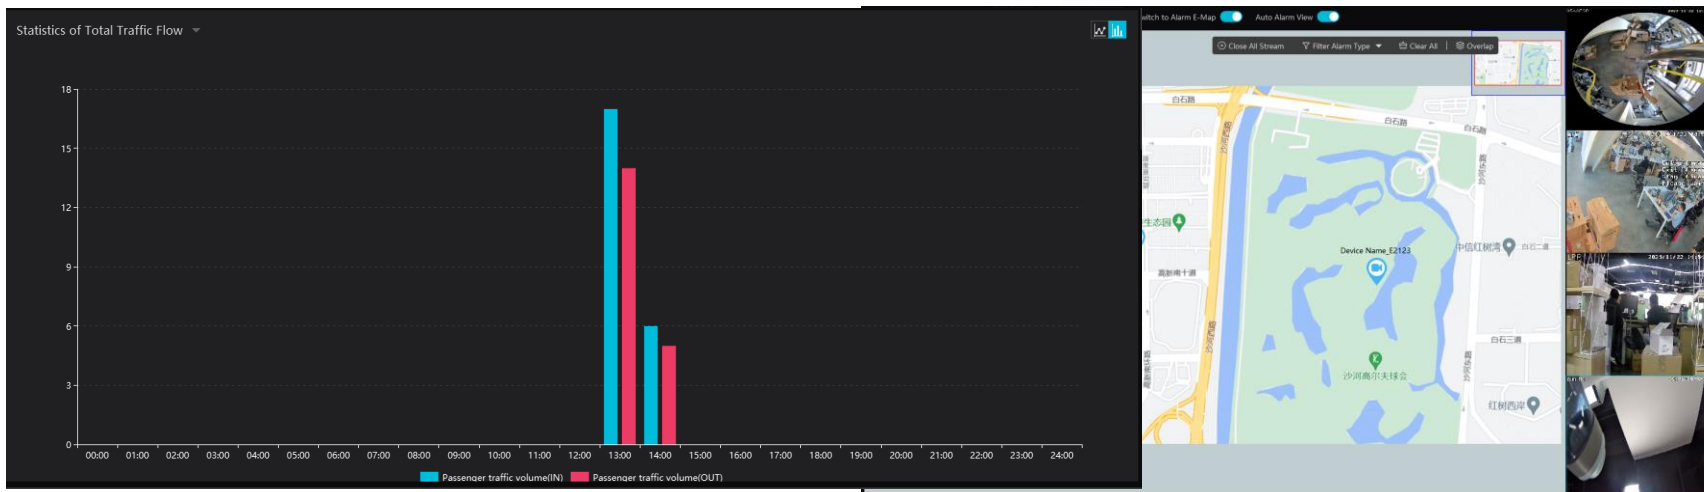

Video and the corresponding overlay POS information can be shown simultaneously in both live view and playback. With this system, user can search text to find out bills and the video recordings.

Retail solution- Office

NVMS software helps retailers manage stores, displays all kinds of data with useful visualizations to get the stores customer flow, hot sale area, and understand future trends.
